Abstract

Financial technology is the application of computer technology to financial services. This report examines the impact of financial technology on the financial industry and the economy. The report discusses the evolution of financial technology, the current state of the industry, and the challenges facing the industry. The report also discusses the impact of financial technology on the economy, including the creation of new jobs and the displacement of existing jobs. The report concludes that financial technology is a double-edged sword, and that the industry must be regulated to ensure that it serves the interests of the public.

ABSTRACT

The paper discusses the concept of digital finance and its emergence in the context of pandemic affairs. It highlights the role of digital finance in facilitating financial transactions and providing financial services during the pandemic. The paper also discusses the challenges and opportunities associated with digital finance in the context of pandemic affairs. The paper concludes that digital finance is a key component of the financial system and its emergence is a result of the pandemic. The paper also suggests that digital finance can play a significant role in the recovery of the economy after the pandemic.

The paper also discusses the role of digital finance in providing financial services during the pandemic. It highlights the role of digital finance in facilitating financial transactions and providing financial services during the pandemic. The paper also discusses the challenges and opportunities associated with digital finance in the context of pandemic affairs. The paper concludes that digital finance is a key component of the financial system and its emergence is a result of the pandemic. The paper also suggests that digital finance can play a significant role in the recovery of the economy after the pandemic.

MANAGEMENT PRACTICES WITHIN MULTINATIONAL ENTERPRISES OF DATA SECURITY AND ICT USER RIGHTS: AN INVESTIGATION OF MULTINATIONAL UNIVERSITIES IN INDIA

THEYAL SURESH K. ANAND

ASSOCIATE PROFESSOR, IIM KOLKATA

10, SADDANAPALLE ROAD, KOLKATA 700032, INDIA

E-MAIL: SURESHK@IIMKOLKATA.INDIA

Abstract

The purpose of this study is to investigate the data security and ICT user rights practices within multinational enterprises (MNEs) in India. The study is based on a sample of 10 MNEs operating in the Indian market. The study finds that MNEs in India generally follow the data security and ICT user rights practices of their home countries. However, there are some differences in the practices of MNEs from different home countries. For example, MNEs from the USA tend to have more stringent data security and ICT user rights practices than MNEs from other home countries. The study also finds that MNEs in India are more likely to have data security and ICT user rights practices that are consistent with Indian law. This suggests that MNEs in India are more likely to be influenced by the local legal environment than MNEs in other countries. The study has several implications for practice. First, MNEs should be aware of the data security and ICT user rights practices of their home countries and the local legal environment. Second, MNEs should consider the needs and expectations of their Indian employees when designing data security and ICT user rights practices. Third, MNEs should regularly review and update their data security and ICT user rights practices to ensure they are consistent with the latest legal requirements and industry best practices.

BIOINFORMATICS IN PRIVATE UNIVERSITIES IN INDIA: AN EMPIRICAL STUDY ON PROMOTION OF BIOLOGICAL INFORMATION SCIENCE IN HIGHER EDUCATION

H. J. Dhall and D. K. Dhall

Department of Information Systems, Indian Institute of Technology
Bombay, Mumbai, Maharashtra, India

Emerald Group Publishing Limited, ISSN 1744-0315

Abstract

Information Science and Systems (ISS) is a multidisciplinary area of study that combines the concepts of information science, information systems, and information technology. The field of ISS is rapidly growing and is becoming an important part of the higher education system in India. This paper presents an empirical study on the promotion of biological information science in higher education in India. The study is based on a survey of 100 private universities in India. The results of the survey show that the majority of private universities in India do not offer any courses in biological information science. However, there is a growing awareness of the importance of biological information science in higher education in India. The study also identifies the factors that influence the promotion of biological information science in higher education in India. The factors include the availability of resources, the quality of faculty, and the interest of students. The study concludes that the promotion of biological information science in higher education in India is a challenging task that requires the support of government, industry, and academia.

Abstract

The present paper discusses the need for introducing information assurance education in India. It also discusses the way to introduce information assurance education in India. The paper is divided into two parts. The first part discusses the need for introducing information assurance education in India. The second part discusses the way to introduce information assurance education in India. The paper is divided into two parts. The first part discusses the need for introducing information assurance education in India. The second part discusses the way to introduce information assurance education in India. The paper is divided into two parts. The first part discusses the need for introducing information assurance education in India. The second part discusses the way to introduce information assurance education in India.

Keywords: information assurance; policy framework; India

1. Introduction

The present paper discusses the need for introducing information assurance education in India. It also discusses the way to introduce information assurance education in India. The paper is divided into two parts. The first part discusses the need for introducing information assurance education in India. The second part discusses the way to introduce information assurance education in India.

NETWORK SECURITY: THREAT & MANAGEMENT

P. R. PAUL, B. K. VINAY

Assistant Professor, VIT-AP, Department of IT, VIT-AP, Vellore, Tamil Nadu, India
VIT-AP, Vellore, Tamil Nadu, India
Correspondence Author: paul.p@vitap.ac.in

Abstract

Network security has become a critical concern for organizations in the digital age. This paper discusses the various threats to network security and the strategies to manage them. It covers topics such as malware, phishing, and data breaches, and provides insights into how organizations can protect their networks and data. The paper also discusses the importance of network security in the context of digital transformation and the role of network security in protecting sensitive information. The paper concludes by highlighting the need for a comprehensive network security strategy that includes both technical and organizational measures.

Keywords: Network Security, Threat Management, Cyber Security, IT Security, Data Protection

1. Introduction

Network security is an essential aspect of IT security. The primary objective of network security is to protect the confidentiality, integrity, and availability of data transmitted over a network. This paper discusses the various threats to network security and the strategies to manage them. It covers topics such as malware, phishing, and data breaches, and provides insights into how organizations can protect their networks and data. The paper also discusses the importance of network security in the context of digital transformation and the role of network security in protecting sensitive information. The paper concludes by highlighting the need for a comprehensive network security strategy that includes both technical and organizational measures.
